Principal Resources

Main Repos

- [Official GitHub Repo of Metropolis](#) (formerly mtheme); older version in TeXLive
- [My GitHub Repo for a local Ubuntu package of Metropolis](#) – formerly mtheme
- [My GitHub Repo for a local Ubuntu package for the Fira font](#)

Briefly

- The packages which can be built (ie not Fira as it needs external fonts which we cannot download during build) are [in this repo](#)
- If you're not on Ubuntu, it is probably more work to get
 - Metropolis into your \LaTeX environment
 - the Fira font into your \LaTeX environment
- I *did* try without (on plain Ubuntu 16.04) and it *builds* but looks less crisp
- So for the time being you probably want these fresh from source, or via my helpers. YMMV.

- mtheme and metropolis changed a bit since I first used them
- I started with a local modification I called m2; the package is still in the launchpad repo
- I generally include a file **header.tex** from the YAML for color, font, ... tweaking at the \LaTeX level, but as these are presentation-specific I didn't include any changes here.

Breakout page

Linear Model

$$\hat{\beta} = \operatorname{argmin}_{b \in \mathbb{R}} S(b) = \left(\frac{1}{n} \sum_{i=1}^n x_i x_i^T \right)^{-1} \cdot \frac{1}{n} \sum_{i=1}^n x_i y_i$$

or in matrix form

$$\hat{\beta} = (X^T X)^{-1} X^T y$$

Using LaTeX Parts: Blocks

As one example of falling back into \LaTeX , consider the example of three different block environments are pre-defined and may be styled with an optional background color.
