Principal Resources

Metropolis

Main Repos

- Official GitHub Repo of Metropolis (formerly mtheme); older version in TeXLive
- My GitHub Repo for a local Ubuntu package of Metropolis formerly mtheme
- My GitHub Repo for a local Ubuntu package for the Fira font

Ubuntu and Launchpad

Briefly

- The packages which can be built (ie not Fira as it needs external fonts which we cannot download during build) are in this repo
- · If you're not on Ubuntu, it is probably more work to get
 - ・ Metropolis into your 町Xenvironment
 - · the Fira font into your **ETEX**environment
- I *did* try without (on plain Ubuntu 16.04) and it *builds* but looks less crisp
- So for the time being you probably want these fresh from source, or via my helpers. YMMV.

Local Adaption

- mtheme and metropolis changed a bit since I first used them
- I started with a local modification I called m2; the package is still in the launchpad repo
- I generally include a file **header.tex** from the YAML for color, font, ... tweaking at the MEXlevel, but as these are presentation-specific I didn't include any changes here.

Breakout page

Using LaTeX Parts: Equations

Linear Model

$$\hat{\beta} = \operatorname{argmin}_{b \in \mathbb{R}} S(b) = \left(\frac{1}{n} \sum_{i=1}^{n} x_i x_i^{\mathsf{T}}\right)^{-1} \cdot \frac{1}{n} \sum_{i=1}^{n} x_i y_i$$

or in matrix form

$$\hat{\beta} = (X^T X)^{-1} X^T y$$
